

Razor Bakk Recurve

Lynx Creek Archery has taken the ageless Turkish recurve into the 21st Century using modern materials and techniques as well as up-to-date limb designs to build the Razor Bakk Recurve bow. This bow is fast, compact and quiet...the ideal companion afield.

The Design

The Razor Bakk Recurve has an overall length of 58 inches and is available in weights ranging from 40# on up. This bow is built one-at-a-time on a custom order basis to meet individual tastes and shooting requirements.

The radically deflected riser of the Razor Bakk Recurve contributes significantly to increased arrow speed. This design, with its deflected riser and recurved limbs, presents a very compact package that facilitates its use in tree stands or ground blinds. Braced, this bow is just over 55 inches from tip-to-tip.

The limb design of the Razor Bakk Recurve ensures that it gains only about 2 lbs per inch though normal draw lengths. This smooth transmission of power results in consistent and predictable arrow flight, an essential ingredient to ensuring on-target accuracy and repeatability. It also means a quieter bow. Moreover, the bow features a large, cut over centre, window as well as a radiused arrow shelf. This should be of particular interest to target and 3D archers.

The one-piece construction of the Razor Bakk Recurve ensures that this bow is both light weight and extremely quiet. With no limb bolts or moving parts to add weight or noise this is one quiet bow that is very easy to carry while still hunting.

Your Custom Bow

The standard bow can be custom ordered with risers of amarillo, ash, bocote, bubinga, cherry, maple, walnut, or zebrawood. Limbs can be had in ash, cherry, red elm, maple, dyed maple, walnut, or yew. Limb tips feature multiple layers of wood and phenolic reinforcement. Typically, the handle of the Razor Bakk Recurve is fashioned similar to that of a longbow both in shape and in its alignment to the arrow shelf. However, there is plenty of material available in the handle to allow the grip to be sculpted for a truly custom fit. Whether your shooting style requires a high, medium or low-wrist, this can be accommodated in the Razor Bakk Recurve.

All high stress areas of this bow, around the arrow shelf and at the flares, are treated with penetrating superglue to fill and seal any microscopic voids or fissures. As well, three coats of 2-part epoxy are applied to all surfaces to ensure that these bows are completely weatherproof.

The basic Razor Bakk Recurve bow comes standard with a Flemish twist string in 450 Dacron and includes beaver fur silencers. Delivery times for the Razor Bakk Recurve average about 4 months. For current prices, visit our website at: www.lynxcreekarchery.com .

Options

Options to further customize your bow include more exotic riser woods such as cocabola, kingwood, or tulipwood. The riser can also be constructed using contrasting woods. More exotic limb woods such as bamboo or zebrawood are also available, all at extra cost. You can also add deer or moose antler overlays to your limb tips or handle to further dress up your one-of-a-kind bow.

For something truly extraordinary, you can also order your Razor Bakk Recurve in “Extra Finish Grade”. Please visit our website or call for pricing.

Cedar arrows spined to your custom bow can also be supplied.

To Order

One of the distinct advantages of a custom built bow is the ability to work with the bowyer to transform your requirements into specifications and see them materialize into a one-of-a-kind bow. To commence this dialogue and order your custom-built Razor Bakk Recurve, visit our website www.lynxcreekarchery.com or contact:
